P1	Making sketch for the prototype build plan	2026-10-01	AC

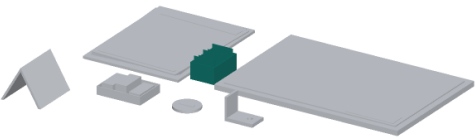

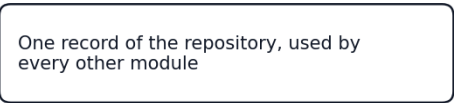

READS

THE MODULE AND THE PARTS INSIDE IT

HANDS ON

WHERE IT GOES

This module's object in colour, the rest of the kit in grey

SIZES THAT MATTER

- Five sources, read once per run
- Replaces eight separate reads of the project file in seven scripts
- Identity defaults: the Design Molecule values

INTERFACE VIEW

What the module reads, the parts inside it and what it hands on; not to scale

HOW TO MAKE IT AND HOW IT FITS

- New for construction (RDK-DDR-003, change P1).
- Write one loader for each of the five sources in the interface view.
 - Give every identity value a default, so a repository with no identity file still renders with the Design Molecule values.
 - When a file cannot be read, stop with the file name and line; never fall back silently to an empty value.
 - Hand back one record. No other module opens these files itself.
- Fits: the checker and the gate read the record (joint 1); the renderer, sheet generator and media renderer read its identity part (joint 4).
- Check: run it on the 38 finished portfolio repositories; every record matches what the present scripts read, field for field.
