READS

THE MODULE AND THE PARTS INSIDE IT

HANDS ON

WHERE IT GOES

This module's object in colour, the rest of the kit in grey

HOW TO MAKE IT AND HOW IT FITS

1. Move every identity string out of the template and style sheet; take them from the reader's identity record (decision D2). Today 13 such strings are written in by hand (R11).
 2. Ship the fonts inside the package (RDK-DDR-003, change P2), not in each repository.
 3. Render only after a passing check; a failing check renders nothing.
- Fits: identity values arrive through joint 4; the TRL on the cover comes from the gate (joint 3). Needs the PDF extra and the Pango and fontconfig system libraries.
- Check: render one repository with the default identity and once with a second identity; no Design Molecule text in the second.

SIZES THAT MATTER

Page: US Letter, 216 x 279 mm, 20 mm margins

Time: 10 s or less for three documents (R4); 1.8 to 3.1 s today

Same text on every run, apart from date and commit (R8)

INTERFACE VIEW

What the module reads, the parts inside it and what it hands on; not to scale
