READS

THE MODULE AND THE PARTS INSIDE IT

HANDS ON

WHERE IT GOES

This module's object in colour, the rest of the kit in grey

HOW TO MAKE IT AND HOW IT FITS

1. Make the sheet size a setting read from the project file: ANSI B (the default) or ISO A3 (decision D3).
2. Lay out frame, zone ticks, title block and revision table from the sheet size, so both sizes use the same code.
3. Take the footer organisation and website from the identity record (joint 4).
4. Keep the text-overlap check and run it on every sheet saved.
- Fits: the project's model hands over named parts (joint 5). The model and its STEP and STL exports belong to the project, not to the kit.
- Check: render one sheet at each size; the overlap check reports nothing; the title block reads the second identity.

SIZES THAT MATTER

ANSI B 431.8 x 279.4 mm today

ISO A3 420 x 297 mm to add (decision D3, R17)

Title block 190 x 56 mm in either size

INTERFACE VIEW

What the module reads, the parts inside it and what it hands on; not to scale
