READS

THE MODULE AND THE PARTS INSIDE IT

HANDS ON

WHERE IT GOES

This module's object in colour, the rest of the kit in grey

HOW TO MAKE IT AND HOW IT FITS

1. Carry over the renderer unchanged; it already gives the same images on every run.
2. Bundle a pinned copy of the 3D viewer script in the package and copy it beside the 3D model file; the viewer page loads it from there, not from the internet (RDK-DDR-003, change P4, for R9).
3. Add the viewer script's license notice to the licensing file the template writes.
4. Stamp every image "concept, not for fabrication".

Fits: parts arrive from the project's model (joint 5); the viewer page and its script sit side by side (joint 7).

Check: open the viewer page with the network switched off; the model turns and zooms.

SIZES THAT MATTER

Time: 60 s or less for 20 parts (R5); 12 to 23 s today

Same images on every run (R8)

Viewer script: about 1 MB, copied beside the model

INTERFACE VIEW

What the module reads, the parts inside it and what it hands on; not to scale
